

BASECRETE®

Flexible Waterproofing Technologies

INTERCEPT

Strengthens & Seals Concrete On A MOLECULAR LEVEL

INTERCEPT is a highly penetrating, highly viscous concrete densifier, to be used as a primary waterproofing for any concrete surface. Upon application, INTERCEPT penetrates deeply into the concrete matrix, on a molecular level, searching and filling out all the voids that exist within any concrete structure. INTERCEPT bonds with the free Calcium and Lime within the concrete, transforming itself into a dense waterproof barrier of colloidal silicate gel.

- ✓ Remains breathable allowing vapors to escape during and after application.
- ✓ Simple application with a low pressure sprayer.
- ✓ Only two quick coats provides waterproofing.
- ✓ Exfoliates trapped salts
- ✓ Accelerates concrete curing time.
- ✓ Reduces rust formation.
- ✓ Reduces ASI (Alkali Silica Reactivity)

INTERCEPT DENSIFIER

BASECRETE®

Flexible Waterproofing Technologies

INTERCEPT

World's #1 Densifier For Concrete

Head-off concrete problems before they ever start when you apply a base coat of INTERCEPT to your fresh concrete pour.

Engineered using years of expertise and scientific development, INTERCEPT provides the perfect "foundation" to keep your concrete safe from rust, water infiltration and chemicals.

Meets Or EXCEEDS All ASTM Standards

APPLICABLE STANDARDS

- ASTM D-56-91 – Flash Point: None
- ASTM D-5084-91 – Permeability
- ASTM C-666 – Freeze/Thaw cycles
- ASTM C-666 B – Salt Resistance
- ASTM C-67 – Efflorescence
- Contains no VOC's
- EPA Compliant

**Application Is EASY...
Lasting Protection.**

Apply two coats with a pump type sprayer and STRENGTHEN your concrete project.

One, 5 gallon pail covers 500-750 Square Feet.
